

LMP1218

Master Power Unit

Version: A1.2 Date: Sept. 2020

WARNING : FIRE HAZARD

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER

NON- COMBUS TABLE SURFACE ONLY

CAUTION : THE DC AND AC BREAKER MUST HAVE BEEN

TURNED OFF BEFORE SERVICING

MADE IN CHINA

- IDM Technologie offer standard warranty with its products, taking no responsibility for direct or indirect loss due to equipment failure.

About this Manual

This manual describes our product features and provides procedure of installations. This manual is for anyone intending to install our equipment.

General Instruction

Thanks for choosing our products and this manual were suitable for LMP1218 Master Power Unit.

This chapter contains important safety and operation instructions. Read and keep this User Guide well for later reference.

The LMP1218 Master Power Unit needs to be installed by professionals and please pay attention to the following points prior to installation:

- 1> Please check the input voltage or voltage of battery is same to the nominal input voltage of this unit.
- 2> Please connect positive terminal "+" of battery to "+" input of this unit.
- 3> Please connect negative terminal "-" of battery to "-" input of this unit.
- 4> Please use the shortest cable to connect and ensure the secure connection.
- 5> While connecting, please secure the connection and avoid short cut between positive terminal and negative terminal of battery, which will cause damage of battery.
- 6> This unit will have high voltage inside. Only authorized electrician can open the case.
- 7> This unit WAS NOT designed to use in any life retaining equipment.

1. General Safety Instruction

1.1 Safety Instruction

As dangerous voltages and high temperature exist within the LMP1218 Master Power Unit, only qualified and authorized maintenance personnel are permitted to open and repair it. Please make sure the unit is turned off before open and repair it.

This manual contains information concerning the installation and operation of LMP1218 Master Power Unit. All relevant parts of the manual should be read prior to commencing the installation. Please follow the local stipulation meantime.

Any operation against safety requirement or against design, manufacture, safety standard, and are out of the manufacturer warranty.

1.2 General Precaution

1.2.1 Do not expose to dust, rain, snow or liquids of any type, it is designed for indoor use. DO NOT block off ventilation, otherwise the LMP1218 Master Power Unit would be overheating.

1.2.2 To avoid fire and electric shock, make sure all cables selected with right gauge and being connected well. Smaller diameter and broken cable are not allowed to use.

1.2.3 Please do not put any inflammable goods near to this unit.

1.2.4 Never place this unit directly above batteries, gases from a battery will corrode and damage LMP1218 Master Power Unit.

1.2.5 Do not place battery over LMP1218 Master Power Unit.

1.3 Precaution regarding battery operation

1.3.1. Use plenty of fresh water to clean in case battery acid contacts skin, clothing, or eyes and consult with doctor as soon as possible.

1.3.2. The battery may generate flammable gas during charging. NEVER smoke or allow a spark or flame in vicinity of a battery.

1.3.3. Do not put the metal tool on the battery, spark and short circuit might lead to explosion.

1.3.4. REMOVE all personal metal items such as rings, bracelets, necklaces, and watches while working with batteries. Batteries can cause short-circuit current high enough to make metal melt, and could cause severe burns.

2. LMP1218 INTRODUCTION

2.1 Features

- Smart battery charger 12V18A
 - ♦ Active PFC charging
 - ♦ Temperature compensated Charging
 - ♦ Voltage compensated Charging
- > 16 Fused DC outputs, including water pump and lighting central control.
- ➢ Battery charging relay 12V 60A
- Battery Low Voltage Protection
- > Built in Battery Switch to isolate the battery when in storage
- Support external remote battery switch
- > Control one water pump with two tank probes

2.2 LED Display

| NO. | LED | Color | Status | Description | |
|-----|-------------|-----------|---------------------------|-------------------------------|--------------------------------|
| | | | ON | Battery charged | |
| 1 | CHG | Green | Flashing | Battery charging | |
| | CHG | Green | (flash once every second) | | |
| | | | OFF | Battery discharge | |
| 2 | Diadea | Crear | ON | Battery discharging | |
| 2 | 2 Dischg | ig Green | OFF | Battery charging | |
| | | | Flash once per cycle | Auxiliary battery voltage low | |
| 3 | | Fault | Red | Flash twice per cycle | Auxiliary battery voltage high |
| 3 | гаш | Fault Red | Flash 3 times per cycle | Unit Over Temperature | |
| | | | Flash 4 times per cycle | Bulk charge timeout | |
| 4 | CHG/ Dischg | Green | Both ON | Power supply | |

Table 1 LED indication

3. KEY FEATURES AND FUNCTIONS

3.1 Multiple inputs

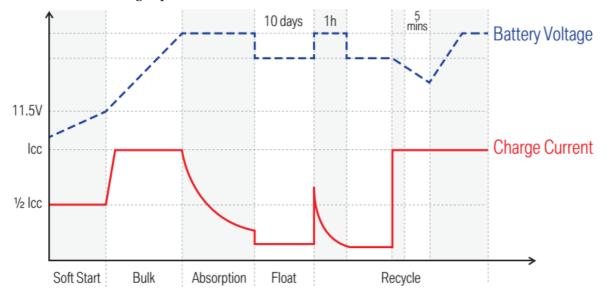

LMP master power unit may have multiple sources at one time. These sources include the Shore power, Solar panel and Alternator (Motor battery). There is priority among these sources, means only one of them will be dominated to charge auxiliary battery, even all of them are available. The priorities are listed below.

| AC Mains | 1 | 1 | 1 | | |
|-------------------|----------|----------|----------|-----------------|-------------|
| Solar panel | 1 | 1 | | 1 | 1 |
| Alternator (Motor | 1 | | 1 | 1 | |
| battery) | | | | | |
| Dominating Source | AC mains | AC mains | AC mains | Alternator | Solar panel |
| | | | | (Motor battery) | |

| Table 2 | Energy | sources | priority |
|---------|--------|---------|----------|
| | | | |

3.2 Battery Charger of Auxiliary Battery

The charger automatically starts when the appropriate qualified power is connected, either from grid, generator. With multiple charging stages (soft start-bulk absorption float-recycle), LMP1218 is designed to fully charge battery quickly. To guarantee the optimal charging for batteries of different states, the LMP1218 features Microprocessor-controlled charging algorithm. The Float and Recycle charging programs guarantees the battery being charged properly upon being connected for a longer period.

Lithium battery charging

The LMP1218 can be configured to charge Lithium battery.

3.3 Power Supply Mode

If no battery is attached to LMP1218 unit, it will work as a power supply automatically with a 12.8VDC output.

3.4 Voltage Charging Relay (VCR)

LMP1218 Master Power Unit has a built-in voltage charging relay (VCR), which can get power from alternator to supply the system whilst the engine is running.

LEAD ACID BATTERY -- When the motor battery reaches 13.4VDC with threshold time delay, the VCR will be engaged to allow power from alternator to supply the system. VCR will continue being engaged until the motor battery's voltage drops under 12.8VDC.

LiFePO4 LITHIUM BATTERY -- When the motor battery reaches 14.0VDC with threshold time delay, the VCR will be engaged to allow power from alternator to supply the system. The VCR will continue being engaged until the motor battery's voltage drops under 13.5VDC.

The VCR will be disengaged when the auxiliary battery's voltage reached 14.8V.

NOTE: If vehicle is fitted with a smart charging system (Variable Voltage or Temperature Compensating), the VCR charge system may not function correctly and a DC-DC Charging system is recommended

Please consult your local dealer or installer for further information.

3.5 Battery Low Voltage Protection (BLVP)

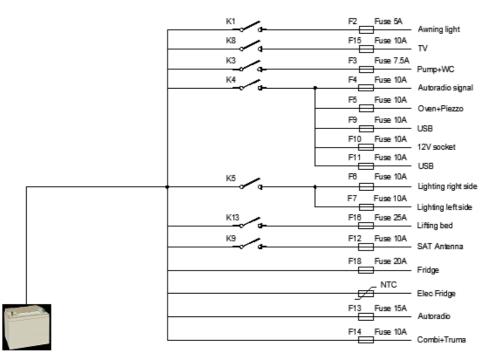

LMP1218 master power unit has a built-in low voltage protection relay. It will disconnect the load once the battery voltage drops below the threshold voltage. The default setting is 10.5VDC.

3.6 Main Battery Switch

The LMP1218 unit provides a convenient way to switch off the output of the on-board auxiliary battery. It protects the auxiliary battery from being discharged by electronics on board, completely isolating the battery.

3.7 DC Distribution

Aux Battery

4. STRUCTURE AND INSTALLATION

4.2 Installation

Ensure the space (at least 3-5cm on the left and right side) beside the LMP1218 unit for the good ventilation.

4.3 Fuse specification

Here is a list for the fuses installed on LMP1218. Please also take reference of Figure 2.

| Fuse No. | DC loads | Specification |
|----------|--------------------------|---------------|
| F2 | Awning light | 5A |
| F3 | Pump | 7.5A |
| F4 | Auxiliaries | 10A |
| F5 | Oven | 10A |
| F6 | Lighting 1 | 10A |
| F7 | Lighting 2 | 10A |
| F9 | USB Socket Bedroom | 10A |
| F10 | USB Socket Kitchen | 10A |
| F11 | 12V Socket Kitchen | 15A |
| F12 | Permanent SAT Antenna | 10A |
| F13 | Permanent Autoradio | 15A |
| F14 | Permanent Heating System | 10A |
| F15 | Permanent TV-Demodulator | 10A |
| F16 | Lifting Bed | 25A |
| F18 | Permanent Fridge | 20A |
| F19 | Footboard | 20A |
| F20 | AUX BAT | 50A |
| F21 | Motor BAT | 50A |
| F1 | By-pass Pump | 25A |
| F8 | By-pass Lighting | 25A |
| F17 | By-pass Lifting | 25A |

Table 4 Fuse specification list

5. OPERATION

5.1 Configuration on LMP1218

You could set the battery type, VCR and Mode through LMP1218 master power unit.

5.1.1 Dip switch setting

The dip switch allows to set VCR mode, Working mode and Battery type.

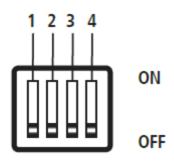

Figure 6 Dip switch

Table 5 Dip switch definition

| DIP SWITCH | 1 | 2 | 3 | 4 |
|------------|----------|--------------|---------|------|
| DIF SWITCH | VCR mode | Working mode | Battery | type |

5.1.1.1 Dip switch for VCR mode and Working mode

Table 6 Dip switch for VCR mode and Working mode selection

| VCR mode | off | AUTO MODE |
|--------------|-----|----------------------|
| VCK mode | on | For external booster |
| Working mode | off | Charger |
| Working mode | on | Power supply |

a) VCR mode

There are two VCR modes:

- VCR / OFF: when this mode is selected, the integrated VCR is working in automatic mode.

- VCR / ON: When this mode is selected, the integrated VCR is disactivated; and an external DC-DC booster can be connected in parallel.

b) Working mode

There are two working modes:

- Charger: When this mode is selected, the LMP will operate as a charger to charge the auxiliary battery.

- Power supply: when this mode is selected, the LMP will produce a stable voltage of 12.8 Vdc to power the connected DC loads.

IDM Technologie

5.1.1.2 Dip switch for battery setting

Table 7 Dip switch for battery type setting

| Battery type | | | | |
|--------------|-----|-----|--|--|
| off | off | AGM | | |
| off | on | GEL | | |
| on | off | LEP | | |

5.1.2 External Battery Switch

LMP1218 offers a possibility to connect with a external battery switch, which allows user to turn on/off the auxiliary battery output remotely.

Figure 7 Battery switch

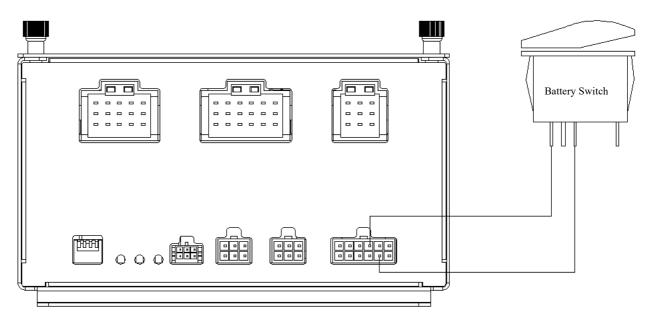

Figure 8 Wiring diagram of battery switch

5.2 Daily Maintenance

- Confirm the Battery Switch is switching on when you want to charge the battery with the AC grid.
- Check the nominal battery voltage is 12Vdc.
- When replacing the existing battery with a new one, please have the new battery fully charged by Grid for the first time to calibrate a precise battery SOC.
