

Installing IGO V2 (IGO V1 running on USB key)

Step 1: Saving the IGO V1 licence and creating the IGO V2 USB key

- Remove the USB key from the USB 2 connector on the car radio and plug it into a computer. There should be the following folders on the key (= IGO V1 USB key):

- Open the "iGO" folder, then the "license" folder. There should be the following 2 files:

- Copy the file named

IDM_Technologie_idMEDIA_NextgenAndroid_idMEDIA_Radio_Navigation_TOMTOM_EU _2018_12_PRODUCT.lyc to a temporary folder on your computer, then remove the IGO V1 USB key from the computer.

- Download the file containing IGO V2. Unzip the file and copy it to a blank formatted USB key. At the root of this key there should be a folder called com.nng.igo.primong, inside which there is a folder called files. Inside this folder are several files:

- Open the "com.nng.igo.primong" folder, then the "files" folder, then the "license" folder.
- Paste the previously saved licence file here (the one copied to the computer's temporary folder), then remove the IGO V2 USB key from the computer.

Step 2: Uninstall the IGO V1 application from the car radio

To start uninstalling the IGO application, click on the APPS icon (do not put an IGO V1 or -V2 USB key in the USB 2 connector):

- Keep your finger on the IGO icon, and a dustbin will appear at the top of the screen on the home page:

- Drag the IGO icon over the bin. The system will prompt you to uninstall the application. Click on uninstall:

Single tuner version

Step 3: Install the IGO V2 application on the hard disk

- Connect the IGO V2 USB key to USB 2 on the car radio.
- Check that the USB key is correctly recognised.
